

Health & Safety

The very nature of the valves we work with means that safety issues are uncompromising and critical. In power stations, oil refineries and chemical plants there is no margin of error.

We are committed to, and have invested heavily in, our HSE policy and systems. By adopting best practice and engaging our people in striving for continuous improvement we are proud of our safety record and are leading the industry in safety standards and the driving of continuous improvement.

Our HSE targets are:

- Zero Lost Time Accidents or Environmental Incidents
- Achieve a Recordable Accident Frequency better than 1.5 x 20-5hrs
- Ensure no injuries to others affected by our work
- 100% conformance to Health, Safety and Environmental auditing
- Senior Management Team, minimum 1 MBWA (Management by Walking About) per Month
- All Supervisors to carry out 1 Safety Audit per week
- Support the supervisors role in managing safety in the work place
- Score >85% on Endotec MBWA (Management by Walking About)
- Managers and supervisors never personally deficient in PPE
- Increase near miss reporting by 10%.
- Ensure effective close out of all near miss/safety concern reports
- Encourage a positive attitude to best practice and recognise good performance
- Commit everyone to a target of no personal injuries and no environmental incidents
